GIS MAPPING with VERIS EC TECHNOLOGY

IF SOIL TEXTURE AFFECTS YOUR CROP AND ITS INPUTS, SOIL EC MAPS ARE THE BASE LAYER FOR PRECISION MANAGEMENT OF YOUR FIELD.

FAST AND 45% CHEAPER THAN CONVENTIONAL SOIL MAPPING ANALYSIS

The Veris 2800 generates two sets of maps, a topsoil map from 0-12" (30 cm) and one of the soil profile 0-36" (91 cm). While uses vary, the top layer is often used for soil sample site selection, and the deeper map for variable rate populations and nitrogen management.
