

# IMS LOGGER

Access and log your field sensors (flow meter, environmental sensors or any 4-20 MA and 0-10 VDC) online anytime, anywhere, using your laptop, desktop, tablet, or mobile phone. The IMS Logger collects and stores the sensor's data and brings it to the "cloud". It is one of IMS' cloud based systems and is used as a stand-alone application or as a component of a more integrated online irrigation system. IMS Logger is part of the IMS IoT solutions communicating over cellular infrastructure with services available and provided by IMS globally.

## FEATURES

- Easy to install, also available with pre-connected sensors
- AC powered or battery operated solar panel/low power device
- Sleep mode induced between data upload for power consumption
- Email notifications for user defined sensor threshold (high/low reading)
- Online data reporting including: graphs and tables with excel exporting option
- Programmable up to 12 uploads per day with DC logger to conserve power as often as every minute with AC
- Optional "Upload Data Now" feature for on-site user operation as needed

## CLOUD CONTROL MANAGEMENT FEATURES

Fully integrated with IMS' AG/pump and IoT cloud solution, automatically start/stop on preset
